

Lippia Dulcis GrowFlow™

Native to Central America, Nicaragua and Mexico, Lippia dulcis is well grown in mild and damp climate and under full sun exposure. This 30 cm height grown plant isn't evergreen, which means, it may lose its 5 cm sized leaves some months during the year. However, during spring time, small beautiful white conical spikes flowers appear. When grown, Lippia (Phyla) dulcis has a shrub-like development. For better performance, fertilize the soil by the end of the winter and water rarely, about once every 2-3 weeks. The pleasant sweetness rising from this special plant's leaves comes from 4 main ingredients: ascorbic acid, monoterpenes, sesquiterpenes, and hernandulcin. That is a natural sweetener for sugar and its substitutes in foods and beverages.

Habit: Trailing

Point of Sale:

The Aztecs used this plant as a sugar plant for their cooking and to ease coughs, colds, bronchitis & asthma.
